Digital Literacy Project Report

Title Page

Name: Jashn Agarwal
Reg No.: 25BAC10012
Branch: B.Tech [ECE]
Year: First Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: 31st March 2026

Introduction

This project was completed as part of the Digital Literacy course, where I took on the role of a Student Digital Ambassador. The objective was to develop essential digital skills and help others navigate the online world safely and effectively. Through five different tasks, I explored topics such as digital awareness, professional online presence, coding platforms, communication etiquette, and cybercrime prevention. Each task helped me understand how digital tools are used in academics and professional environments. This project also allowed me to apply practical knowledge by creating content, building profiles, and analyzing real-world scenarios. Overall, it enhanced my ability to use digital platforms responsibly and efficiently.

Task 1 – Infographic Write-up

For this task, I created a digital literacy awareness infographic using Canva. The infographic covers three main topics: digital literacy, safe internet practices, and professional online presence. I described digital literacy as the ability to use digital tools effectively and responsibly. I also included safety tips such as using strong passwords, avoiding unknown links, and protecting personal information online. Additionally, I highlighted the importance of maintaining a professional online presence by keeping social media profiles clean and using platforms like LinkedIn for career growth.

I used simple icons, short text, and clear headings to make the design visually appealing and easy to understand. The main challenge I faced was selecting relevant information and fitting it into a single page without overcrowding the design. This task helped me improve my ability to present information in a clear and concise way. It also increased my understanding of how important digital literacy is in today’s world.

Task 2 – Digital Portfolio Write-up

In this task, I created and updated profiles on three platforms: GitHub, LinkedIn, and HackerRank. GitHub is used for storing and sharing coding projects, LinkedIn is used for building a professional network, and HackerRank helps in improving coding skills through practice problems. On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I added my education details, including my degree, institution, and expected graduation year.

These platforms are important for students as they help in building a professional identity online. Over the next four years, I plan to regularly update my GitHub with projects, connect with professionals on LinkedIn, and improve my coding skills through HackerRank. This will help me prepare for internships and job opportunities. This task helped me understand the importance of maintaining a professional digital presence and how it can impact my future career.

Task 3 – Platforms Write-up

For this task, I explored both coding practice and collaboration platforms. I used HackerRank for coding practice and completed a beginner-level problem. This helped me understand how coding platforms work and how they can improve problem-solving skills. It also gave me confidence to practice more coding questions in the future.

In the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. The form included both multiple-choice and short-answer questions. I also viewed responses in Google Sheets, which helped me understand how data is collected and analyzed.

These tools are very useful academically. Coding platforms help in developing logical thinking and programming skills, while Google Forms can be used for surveys, quizzes, and data collection in projects. This task showed me how digital tools can be used effectively for learning and collaboration.

Task 4 – Communication Write-up

Poor digital communication can create misunderstandings and problems. For example, if a student sends an email to a professor without a proper subject line or greeting, it may be ignored or considered unprofessional. Similarly, using informal language in professional emails can create a negative impression.

To avoid such issues, emails should always include a clear subject, polite greeting, and proper structure. The tone should be respectful and concise. In my emails, I ensured that I followed all these rules. I also created a checklist of social media do’s and don’ts to promote responsible online behavior.

This task helped me understand the importance of clear and professional communication in academic and professional environments.

Task 5 – Cybercrime Write-up

While researching cybercrime, I found phishing attacks to be very common and dangerous. What surprised me most is how easily people can be tricked into sharing sensitive information through fake emails or messages. These attacks often look very real, making them difficult to identify.

I learned that students are also common targets, especially in cases involving fake scholarship or job offers. As a result of this task, I will be more careful while clicking on links and sharing personal information online. I will also ensure that I verify sources before trusting any message or email.

This task increased my awareness of online threats and taught me how to stay safe in the digital world.

Conclusion

This project helped me gain practical knowledge about digital literacy and its importance in daily life. I learned how to use various digital tools, create a professional online presence, and communicate effectively. The tasks also improved my awareness of cyber safety and responsible internet usage. Overall, this project has prepared me to use digital platforms more confidently and responsibly, both in academics and in the future workplace.
