Digital Literacy Project Report

Title Page

Name: Jashn Agarwal
Reg No.: 25BAC10012
Branch: B.Tech [ECE]
Year: First Year
Course Code: CSE0001
Course Title: Digital Literacy
Date: 31st March 2026

Introduction

This project was completed as part of the Digital Literacy course, in which I assumed the role of a Student Digital Ambassador. The goal was to build fundamental digital skills and assist people in safely and efficiently navigating the online world. By completing five different tasks, I examined subjects including digital literacy, professional online identity, programming platforms, proper communication manners, and ways to avoid cybercrime. Each task helped me grasp how digital tools are utilized in academic and professional settings. This project also gave me the opportunity to use practical knowledge by developing content, setting up profiles, and examining real-life situations. In general, it improved my ability to use digital platforms in a responsible and efficient manner.

Task 1 – Infographic Write-up

For this task, I designed an infographic about digital literacy awareness using Canva. The infographic focuses on three key areas: digital literacy, safe online behavior, and maintaining a professional image on the internet. I defined digital literacy as the skill to effectively and responsibly utilize digital tools. I also added safety advice, such as creating strong passwords, steering clear of unfamiliar links, and safeguarding personal information on the internet. I also emphasized the significance of maintaining a professional online image by keeping social media accounts up to date and utilizing platforms such as LinkedIn to support career development.

I employed straightforward icons, brief text, and well-defined headings to create a visually attractive and easy-to-comprehend design. The primary difficulty I encountered was choosing pertinent information and arranging it on one page without making the design feel cluttered. This task helped me enhance my skills in conveying information clearly and succinctly. It also deepened my awareness of the significance of digital literacy in today's world.

Task 2 – Digital Portfolio Write-up

For this task, I set up and revised my profiles on three websites: GitHub, LinkedIn, and HackerRank. GitHub is used to store and share coding projects, LinkedIn is used to build a professional network, and HackerRank assists in enhancing coding abilities through practice exercises. On GitHub, I set up a profile README that features my fundamental information and objectives for learning. On LinkedIn, I included my educational background, such as my degree, the university I attended, and the year I anticipate graduating.

These platforms are significant for students because they assist in developing a professional online presence. Over the next four years, I intend to consistently add projects to my GitHub, network with professionals on LinkedIn, and enhance my coding abilities using HackerRank. This will assist me in getting ready for internships and employment opportunities. This assignment made me realize the significance of keeping a professional online image and how it can affect my future career.

Task 3 – Platforms Write-up

For this task, I examined both programming practices and collaborative platforms. I used HackerRank to practice coding and solved a basic-level problem. This allowed me to grasp how coding platforms function and how they can enhance problem-solving abilities. It also boosted my confidence to work on more coding problems in the future.

In the collaborative section, I developed a Google Form called “Digital Literacy Awareness Quiz” containing five questions. The form contained a mix of multiple-choice and short-answer questions. I also examined responses using Google Sheets, which helped me grasp how data is gathered and analyzed.

These tools are highly beneficial for academic purposes. Coding platforms aid in building logical reasoning and programming abilities, whereas Google Forms can be utilized for surveys, tests, and gathering data in projects. This assignment demonstrated how digital tools can be effectively utilized for learning and working together.

Task 4 – Communication Write-up

Poor digital communication can create misunderstandings and problems. For example, if a student sends an email to a professor without a proper subject line or greeting, it may be ignored or considered unprofessional. Similarly, using informal language in professional emails can create a negative impression.

To avoid such issues, emails should always include a clear subject, polite greeting, and proper structure. The tone should be respectful and concise. In my emails, I ensured that I followed all these rules. I also created a checklist of social media do’s and don’ts to promote responsible online behavior.

This task helped me understand the importance of clear and professional communication in academic and professional environments.

Task 5 – Cybercrime Write-up

While researching cybercrime, I found phishing attacks to be very common and dangerous. What surprised me most is how easily people can be tricked into sharing sensitive information through fake emails or messages. These attacks often look very real, making them difficult to identify.

I learned that students are also common targets, especially in cases involving fake scholarship or job offers. As a result of this task, I will be more careful while clicking on links and sharing personal information online. I will also ensure that I verify sources before trusting any message or email.

This task increased my awareness of online threats and taught me how to stay safe in the digital world.

Conclusion

This project helped me gain practical knowledge about digital literacy and its importance in daily life. I learned how to use various digital tools, create a professional online presence, and communicate effectively. The tasks also improved my awareness of cyber safety and responsible internet usage. Overall, this project has prepared me to use digital platforms more confidently and responsibly, both in academics and in the future workplace.
